The Lessons of the Cuban Missile Crisis

For 13 chilling days in October 1962, it seemed that John F. Kennedy and Nikita S. Khrushchev might be playing out the opening scenes of World War III. The Cuban missile crisis was a uniquely compact moment of history. For the first time in the nuclear age, the two superpowers found themselves in a sort of moral road test of their apocalyptic powers.

The crisis blew up suddenly. The U.S. discovered that the Soviet Union, despite repeated and solemn denials, was installing nuclear missiles in Cuba. An American U-2 spy plane came back with photographs of the bases and their support facilities under construction: clear, irrefutable evidence. Kennedy assembled a task force of advisers. Some of them wanted to invade Cuba. In the end, Kennedy chose a course of artful restraint; he laid down a naval quarantine. After six days, Khrushchev announced that the Soviet missiles would be dismantled.

The crisis served some purposes. The U.S. and the Soviet Union have had no comparable collision since then. On the other hand, the humiliation that Khrushchev suffered may have hastened his fall. The experience may be partly responsible for both the Soviet military buildup in the past two decades and whatever enthusiasm the Soviets have displayed for nuclear disarmament.

Now, on the 20th anniversary of the crisis, six of Kennedy's men have collaborated on a remarkable joint statement on the lessons of that October. It contains some new information, particularly in Point Eight, and at least one of their conclusions is startling and controversial: their thought that, contrary to the widespread assumption of the past two decades, the American nuclear superiority over the Soviets in 1962 had no crucial influence with Washington or Moscow at the time—and that in general, nuclear superiority is insignificant.

The authors are Dean Rusk, then Secretary of State; Robert McNamara, Secretary of Defense; George W. Ball, Under Secretary of State; Roswell L. Gilpatric, Deputy Secretary of Defense; Theodore Sorensen, special counsel to the President; and McGeorge Bundy, special assistant to the President for national security affairs. Their analysis:

In the years since the Cuban missile crisis, many commentators have examined the affair and offered a wide variety of conclusions. It seems fitting now that some of us who worked particularly closely with President Kennedy during that crisis should offer a few comments, with the advantages both of participation and of hindsight.

FIRST: The crisis could and should have been avoided. If we had done an earlier, stronger and clearer job of explaining our position on Soviet nuclear weapons in the Western Hemisphere, or if the Soviet government had more carefully assessed the evidence that did exist on this point, it is likely that the missiles would never have been sent to Cuba. *The importance of accurate mutual assessment of interests between the two superpowers is evident and continuous.*

SECOND: Reliable intelligence permitting an effective choice of response was obtained only just in time. It was primarily a mistake by policymakers, not by professionals, that made such intelligence unavailable sooner. But it was also a timely recognition of the need for thorough overflight, not without its hazards, that produced the decisive photographs. The usefulness and scope of inspection from above, also employed in monitoring the Soviet missile withdrawal, should never be underestimated. *When the importance of accurate information for a crucial policy decision is high enough, risks not otherwise acceptable in collecting intelligence can become profoundly prudent.*

THIRD: The President wisely took his time in choosing a course of action. A quick decision would certainly have been less carefully designed and could well have produced a much higher risk of catastrophe. The fact that the crisis did not become public in its first week obviously made it easier for President Kennedy to consider his options with a maximum of care and a minimum of outside pressure. Not every future crisis will be so quiet in its first phase, but *Americans should always respect the need for a period of confidential and careful deliberation in dealing with a major international crisis.*

Kennedy signing Cuban quarantine

FOURTH: The decisive military element in the resolution of the crisis was our clearly available and applicable superiority in conventional weapons within the area of the crisis. U.S. naval forces, quickly deployable for the blockade of offensive weapons that was sensibly termed a quarantine, and the availability of U.S. ground and air forces sufficient to execute an invasion if necessary, made the difference. American nuclear superiority was not in our view a critical factor, for the fundamental and controlling reason that nuclear war, already in 1962, would have been an unexampled catastrophe for both sides; the balance of terror so eloquently described by Winston Churchill seven years earlier was in full operation. No

one of us ever reviewed the nuclear balance for comfort in those hard weeks. *The Cuban missile crisis illustrates not the significance but the insignificance of nuclear superiority in the face of survivable thermonuclear retaliatory forces. It also shows the crucial role of rapidly available conventional strength.*

FIFTH: The political and military pressure created by the quarantine was matched by a diplomatic effort that ignored no relevant means of communication with both our friends and our adversary. Communication to and from our allies in Europe was intense, and their support sturdy. The Organization of American States gave the moral and legal authority of its regional backing to the quarantine, making it plain that Soviet nuclear weapons were profoundly unwelcome in the Americas. In the U.N., Ambassador Adlai Stevenson drove home with angry eloquence and unanswerable photographic evidence the facts of the Soviet deployment and deception.

Still more important, communication was established and maintained, once our basic course was set, with the government of the Soviet Union. If the crisis itself showed the cost of mutual incomprehension, its resolution showed the value of serious and sustained communication, and in particular of direct exchanges between the two heads of government.

When great states come anywhere near the brink in the nuclear age, there is no room for games of blindman's buff. Nor can friends be led by silence. They must know what we are doing and why. *Effective communication is never more important than when there is a military confrontation.*
